About me

I am a 25 year old, mostly autodidact, webdeveloper from Denmark with a passion for all things interactive. In in my spare time i jog, play/make games and read books about programming(At the moment i am studying Perl for system adminstration purposes).

Professionally i am a mixed frontend and PHP-backend developer with 5 years of experience in the field. I enjoy challenging work, and i often try out new libraries and experiement with the best sollutions to continuesly improve the projects i work on.

I am used to working in small teams collaborating with both designers and project managers to make sure the project gets done, in regards to this i have some Scrum experience.

My current coding bench of choise is Sublimetext with a bunch of addons, and homebrew snippets, on Mac OSX. Recently i have been thinking about going Vim/Linux as it seems fun tho. I switch it up for compiled languages as it makes more sense to use a IDE for that, like Eclipse or CodeBlocks, but i rarely have that need for anything but Actionscript at the moment.

Experience

Nodes (3 years 9 months)

I have worked at Nodes for almost 4 years and during my stay i have been involved in more projects than i can remember.

The projects have mainly involved campaign Facebook applications and social media, therefore i have gotten to work with many diffent things, including but not limited to Facetracking, image manipulation, large datasets, geolocation, google-maps, RESTfull API development, mobile websites, responsive design and the list goes on.

I enjoy working at Nodes, however it has become time for me to move on so i can continue to refine my self and my career. In particular i am looking for places where i can have a effect on the tools used and collaborate with other team members on coming up with ways to solve interesting problems.

Decaro (~1 year)

I worked at Decaro for little more than a year developing mainly Joomla sites and flash applications, at Decaro i was introduced to the then very early 3D libraries for flash, something i still play with today tho the tools have been upgraded a good deal since.

In relation to that i find that Unity has been luring me in more these days as well.

Languages

English (Full professional proficiency)

Danish (Native)

Skills

Profesional skills

A list of things i have worked with professionally and can use comfortably without any problems, listed in no perticular order.

PHP

MySQL

CakePHP

RESTful API

CSS3

LESS

Javascript

Photoshop

Facebook API

Flash CS

Flash builder

Actionscript 3

Jquery

BackboneJS

AngularJS

Google maps

JSON

XML

AJAX

Linux

HTML5

SEO

Responsive layouts

Graceful degradation

Git

Sparetime skills

Things i have worked with in my spare time at some point but not nessesarely professionally or very skilled, meaning i have limited knowledge enough to use them if i had to, but it will take some extra time.

Java

C

C++

PBasic

Picaxe

Arduino

NodeJS

Debian system administration

Virtualization

AppJS

Adobe Air for mobiles

Blender

Projects

As i have mentioned in the top i have worked on a long list of projects. The following link leads to a list of some of the more interesting projects/brands i have been working on, i am still working on the list tho, so proper descriptions and images may not be accessible yet.

See projects (projects.html)

Education

Roskilde Technical school
Webintegrator

I Graduated from Roskilde Technical school in 2008 as a Webintegrator and have since then expanded upon my field of knowledge in regards to computers quite a bit, mainly out of personal interrest and professional demand.
